

Speedometer Removal

05-08 Tacoma

05-08 Tacoma

4. Pull straight out on the lower trim. There are some screws at the bottom to remove if you need to.

8. All this trim is held in with only clips.

12. Remove the screws on each side of the cluster.

1. Mark the needle position with the key off.

2. Phillips screw. It is plastic. You can not put any pressure on it to remove.

3. The screw is held in with this plastic clip. Remove.

7. Make sure the lower trim is pulled out before the top trim.

11. Slide the trim part to the left to remove.

5. Pull out on the trim. It is held in with clips.

9. Unplug the switches.

13. Remove the screws.

6. Continue pulling all around the trim.

10. You can push the switches thru the front to unplug if needed.

14. The lower swicthes can be pulled out if necessary when you install.

Use this diagram to mark each needle position. Mark with the key turned off.
